subject: ATTENTION please: safe transport of cryogen

Lab Safety Wardens and PI's,

This is to ask your support in reminding all in your lab groups who transport liquid nitrogen or liquid helium dewars that it is **imperative that they abide by the requirement that two people are required to transport cryogen dewars.**

The route to/from the Physics liquid nitrogen dispenser and even more so the route to/from the liquid air plant in Chemistry is bumpy and treacherous. **Two people are required to be sure the dewar doesn't tip and cause injury.**

Thank you for your support,

Anthony
