Great physics
is done when we interact with
and listen to everyone
without prejudice.

 **Prof. Yasunori Nomura**

The old adage is true: a change is as good as a rest. I often find my brain solves a challenging question at work for me while I am focusing on something quite different - be it driving the Morgan, taking adventurous holidays, or playing with my daughter!

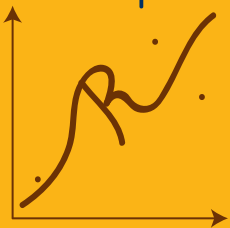

Prof. Gabriel Orebi Gann

Students and postdocs in my group, and undergraduates I have advised and worked with, have gone on to find satisfying positions in a wide range of industries, at teaching colleges, and at research universities. I try to support the goals of all of the students and postdocs I interact with, irrespective of whether the paths they take happen to be similar to my own career path.

Prof. Eliot Quataert
